Notes:
 *In these countries sales are measured in kg, the conversion factor depends on the normal density of gaseous natural gas in each country. The default value used is 0.73 kg/Nm³.

**In Brazil the price shown for gasoline is really the gasohol price (with lower kWh/litre number than standard gasoline).

Notes:
 Calculations in this table are based on the ratio between CNG and each respective other fuel. The energy content of each fuel has been considered.

Default values used for fuel price calculations:

CH4 content in natural gas is 97%
 CNG energy content is 9.6 kWh/Nm³
 Gasoline energy content is 8.6 kWh/litre
 Diesel energy content is 9.85 kWh/litre

All data shown on this work sheet are the result of work conducted by NGVA Europe and the GVR. The data may not be manipulated and redistributed while maintaining the logos of NGVA Europe and the GVR. When using data for various summaries or graphs it would, however, be appreciated if you state that the information presented is based on data supplied via NGVA Europe and the GVR.
